CSCE 247 – Software Engineering

- **Credit Hours:** 3 hours
- **Contact Hours:** 3 lecture hours
- **Instructors:** Dr. Greg Gay
- **Required Textbooks:** None.
- **Bulletin Description:** Fundamentals of software design and development; software implementation strategies; object-oriented design techniques; functional design techniques; design patterns; design process; source control; testing.
- **Prerequisite:** C or better in CSCE 146
- **Required Course in CIS and CS**
- **Course Outcomes:** Students will be able to:
  1. Distinguish between software development processes and choose an appropriate process for a particular project, including the selection of appropriate source control and project management tools.
  2. Elicit requirements and create a requirements specification document.
  3. Develop software architectural models and analyze how control and data flow through a system.
  4. Apply the principles of object-oriented software design, including how to describe and model the structure of a system.
  5. Apply software design patterns.
  6. Apply the fundamentals of requirements-based and structure-based software testing and the accompanying test selection methods.

- **Student Outcomes addressed by course**

</table>

- **Topics covered**
  1. Introduction to SE/Principles (1 week)
  2. Requirements Specification (2 weeks)
  3. Project Management (1 week)
  4. Design Fundamentals (1 week)
  5. Software Architecture (1 week)
  6. Design (OO) (3 weeks)
  7. Implementation (1 week)
  8. Testing (3 weeks)
  9. Reliability and Maintenance (1 week)
