CSCE 313 - Embedded Systems
Credit Hours: 3 hours
Contact Hours: 3 lecture hours
Instructor: Dr. Jason Bakos

Bulletin Description: Fundamentals of embedded systems: hardware components, software components, hardware/software interface design, and hardware/software co-design.

Prerequisites: CSCE 211, 212

Required Course in CE program

Learning Outcomes: Students will be able to:
1. Perform hardware/software co-design for a programmable embedded system;
2. Write software that directly interfaces with I/O peripherals such as LEDs, LCD panels, buttons, monitors, and remote consoles;
3. Write software that performs real-time processing of audio and video data;
4. Use high-level synthesis tools to develop coprocessor architectures in an embedded environment.

Student (Program) Outcomes addressed by course (Detailed mappings of these course outcomes to the Student Outcomes of the programs are in the detailed syllabus and the Assessment plan.)

Topics covered and approximate weight:
1. Design constraints for embedded systems (1 week);
2. Platform FPGA design methodology for programmable system-on-a-chip (2 weeks);
3. Image processing (3 weeks);
4. Audio processing (3 weeks);
5. Video processing (3 weeks);
6. Embedded application acceleration using special-purpose logic (2 weeks).
