CSCE 330 - Programming Language Structures
Credit Hours: 3 hours
Contact Hours: 3 lecture hours
Instructor: Dr. Valtorta

Bulletin Description: Formal specification of syntax and semantics; structure of algorithms; list processing and string manipulation languages; statement types, control structures, and interfacing procedures.
Prerequisites: CSCE 240, MATH 174 or MATH 374

Required Course in CS program
Learning Outcomes: Students will be able to:
1. Categorize a language as imperative (procedural), functional (applicative) or declarative (logic).
2. Generate and use syntax descriptions in EBNF.
3. Write code in a functional language (e.g., Haskell).
   Write code in a logic language (e.g., Prolog).

Student (Program) Outcomes addressed by course (Detailed mappings of these course outcomes to the Student Outcomes of the programs are in the detailed syllabus and the Assessment plan.)

Topics covered:
1. Evolution of major programming languages (2 hours)
2. Formal description of programming language syntax (4 hours)
3. Denotational semantics (1 hours)
4. Interpreters, compilers, assemblers (2 hours)
5. Data abstractions (3 hours)
6. Control abstractions (2 hours)
7. Run-time behavior of programs and procedural semantics (3 hours)
8. Programming environments (3 hours)
9. Functional languages (14 hours)
10. Logic languages (8 hours)
