

How do you get started?

1. Breathe.
2. Go To Lab
3. Download a Text editor onto your laptop in order to work from home on assignments
 - a. PC-Notepad or Scite
 - b. Mac-TextWrangler or TextMate
4. Bring a USB/Flash drive
5. We will show you in lab how to create your first webpage.
6. The first webpage will be research based. You will practice the paragraph element and headings element.
7. You will receive written instructions for each lab from your lab instructor. The lab handout has step by step directions to create your webpage. We specify the elements/tags to use and then ask you to fill in the content for each element. The content is unique to each student. Therefore, no two students turn webpages that are identical.
8. Follow lab instructions for creating, editing, saving and running HTML file.
9. Ask questions. Do not leave lab without completing your work. If you do not understand the assignment, ask for help.
