

RECAP WEEK 1

HTML ELEMENT

- Elements consist of:
 - **opening tag** with/without attributes
 - **content** or no content
 - **closing tag** or no closing tag

```
<h1 style="color:blue" id="h_1">This is fun!</h1>
```

EXAMPLES

h1 heading

```
<h1>hello!</h1>
```

meta

```
<meta charset="utf-8">
```

horizontal line

```
<hr>
```

RECAP WEEK 1

TAG <h1>

- **Open angle bracket**, <, then **tag name** followed by **closing angle bracket**, >
- **OPEN TAG** → <p>
- **CLOSING TAG** → </p> (indicated by a forward slash)

ATTRIBUTES

- Control the appearance of an element and actions on/by an element
- **Contained** within **opening tag** and the **style element** (deferred til CSS lectures)
- **Attribute**=followed by equal sign then attribute value then enclosed by double quotes

RECAP WEEK 1

ATTRIBUTE VALUES and CONTENT

```
<h1 style="color:blue" id="h_1"> This is fun!</h1>
```

```
<a href= "https://sc.edu" target="_blank" class="select"></a>
```

Text in blue indicates values you can change. There are many other attribute values and content that is modifiable.

ELEMENTS SO FAR:

- **html, head, meta, title, body**
- Paragraph `<p></p>`
- Preformatted Text `<pre> </pre>`
- `<hr>` and `
`
- Headings `<h1>` through `<h6>`
- HTML Comments `<!-- This is Fun! -->`
- HTML5 TEMPLATE **html5 template**

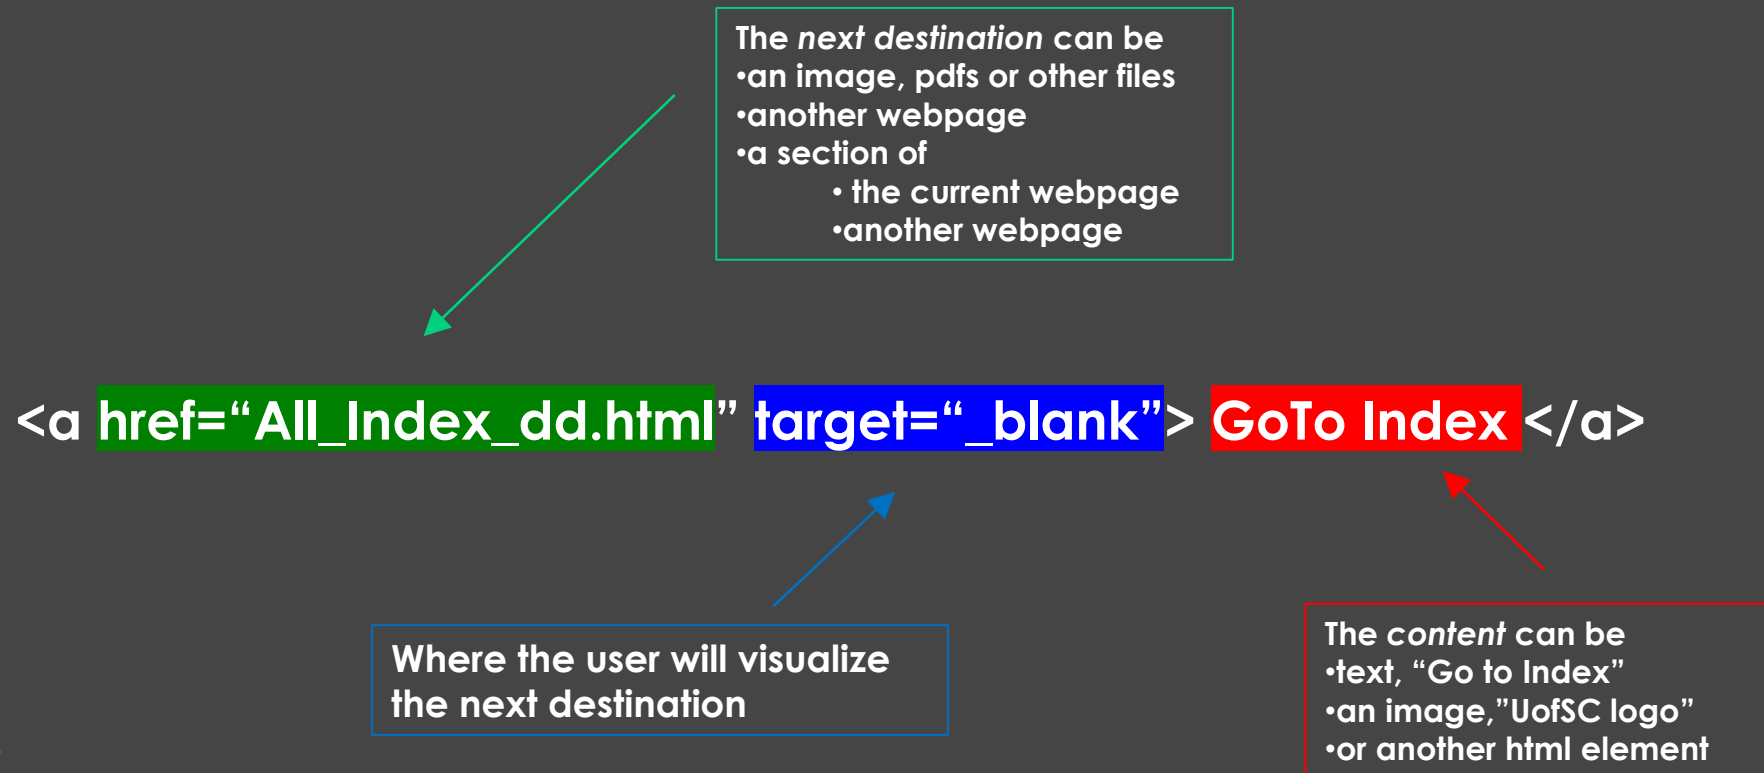

RECAP WEEK 1

CONTAINERS-BUILDING BLOCKS of HTML

Anchor Element-hyperlink

Hyperlinks:

Redirects the user to “somewhere” else. Within a webpage, the user clicks *the content* linked to the *next destination*.

HREF –specifies the address of the destination link

- **Can link to another website**
 - href="https://sc.edu/"
 - href="All_102_submissions/All_index_dd.html/"
- **Can link to a section in this webpage or to another webpage.** Incorporates id element within the destination html element
 - href="All_102_submissions/lab_02_dd.html#links/"
 - href="#favorites/"
- **Can link to a picture**
 - href="All_102_submissions/happy_face.jpg/"

HREF-Jump to a section within the current webpage or another webpage

1. Create an **id** within the html element to jump to:
 - a. <h1 id="links"> My favorite Links </h1>
 - b. The **id** is chosen by you and is unique. **Id's** cannot start with a number!
2. Now, reference this **id** within your anchor element.
 - a. Go to My Links or
 - b. Go to My Links

TARGET –where to visualize the link

- **Default – opens in current tab overwriting current webpage or frame**
- **_blank –opens in a new tab or window**
- **_top**
- **Iframe and _parent**
- You should familiarize yourself with the different target values. Create a hyperlink to UofSC website and then modify target value and observe where the new webpage opens.

Filepaths: Absolute and Relative?

- Go to this demo to practice and review the differences between absolute filepaths and relative filepaths. You will see this frequently in lab.
- [W3 Schools File Path Demo](#)

LISTS in HTML5

- **List Container Elements**
 - Unordered List ``
 - Ordered List ``
 - Description List `<dl></dl>`
- The open and close tags indicate the start and end of the LIST structure
- **List content:**
 - **itemized** with the list item element `` for **unordered lists** ``
 - **enumerated** with list item element `` for **ordered lists** ``
 - **described** with term element `<dt>` and data element `<dd>` for **description lists** `<dl>`
 - `` contains anchor tags, text, images and more
 - `<dd>` contains only text
- Nesting lists (list within a list) are only applicable to unordered lists and ordered lists. Nesting lists is similar to creating a multi-level outline.

LISTS EXAMPLES

Ordered List

```
<h1>School Supplies</h1>
<ol><!--Start List-->
  <li>Paper</li>
  <li>Pencils</li>
  <li>Pens</li>
</ol><!--End List-->
```

Description List

```
<dl><!--Start List-->
  <dt>Vegetables</dt>
  <dd>kale</dd>
  <dd>asparagus</dd>
  <dt>Fruits</dt>
  <dd>blueberries</dd>
  <dd>bananas</dd>
</dl><!--End List-->
```

Unordered List with hyperlinks: <a> contained within

```
<ul> <!--Start List-->
  <li><a href="https://sc.edu" target="_blank"> go to sc dot edu</a></li>
  <li><a href="https://cse.sc.edu/~denisesd" target="_blank">goto 102</a></li>
</ul> <!--End List-->
```

LISTS EXAMPLES

NESTING LISTS

4 lists or 4 leveled outline

GOTO DEMO OF LISTS

```

<h1>Nesting Lists</h1>
<ul> <!-- Start Main List-->
  <li>Gamecock Coaches
    <ul> <!--Start List 2 -->
      <li> Basketball
        <ul> <!-- Start List 3-->
          <li>Dawn Staley</li>
          <li>Frank Martin</li>
        </ul> <!--End List 3-->
        </li> <!--Close Basketball-->
      <li> Baseball/Softball
        <ul> <!-- Start List 4-->
          <li> Mark Kingston</li>
          <li> Beverly Smith</li>
        </ul> <!--End List 4-->
        </li> <!--Close Baseball-->
    </ul> <!--End List 2-->
  </li> <!--Close Gamecock Coaches-->
</ul> <!--End Main List-->

```
