## The NextDate Function

- 2.3.1 Problem Statement
- NextDate is a function of three variables: month, day, and year. It returns the date of the day after the
- input date. The month, day, and year variables have integer values subject to these conditions:
  - c1.  $1 \leq \text{month} \leq 12$
  - c2.  $1 \leq \text{day} \leq 31$
  - c3.  $1812 \leq \text{year} \leq 2012$
- Jorgensen, Paul C. (2011-07-16). Software Testing (Page 22). Auerbach Publications. Kindle Edition.

## The Commission Problem

- 2.4.1 Problem Statement
- A rifle salesperson in the former Arizona Territory sold rifle locks, stocks, and barrels made by a gunsmith in Missouri. Locks cost \$45, stocks cost \$30, and barrels cost \$25. The salesperson had to sell at least one complete rifle per month, and production limits were such that the most the salesperson could sell in a month was 70 locks, 80 stocks, and 90 barrels.
- After each town visit, the salesperson sent a telegram to the Missouri gunsmith with the number of locks, stocks, and barrels sold in that town. At the end of a month, the salesperson sent a very short telegram showing –1 lock sold. The gunsmith then knew the sales for the month were complete and computed the salesperson's commission as follows:
  - 10% on sales up to (and including) \$1000,
  - 15% on the next \$800, and
  - 20% on any sales in excess of \$1800.
- The commission program produced a monthly sales report that gave the total number of locks, stocks, and barrels sold, the salesperson's total dollar sales, and, finally, the commission.

ID Card

Buttons: B1, 1, 2, 3, B2, 4, 5, 6, B3, 7, 8, 9, 0, CANCEL

9/3/2013 Boundary Value Testing 5 Jorgensen, Paul C. Software Testing A Craftsman Approach CSCE 747 Fall 2013 5

- 2.5.1 Problem Statement
- The SATM system communicates with bank customers via the 15 screens shown in Figure 2.4.
- Using a terminal with features as shown in Figure 2.3, SATM customers can select any of three transaction types:
  - deposits,
  - withdrawals, and
  - balance inquiries.
- These transactions can be done on two types of accounts: checking and savings.

## Saturn Windshield Wiper Controller

- The windshield wiper on some Saturn automobiles is controlled by a lever with a dial. The lever has four positions — OFF, INT (for intermittent), LOW, and HIGH — and the dial has three positions, numbered simply 1, 2, and 3.
- The dial positions indicate three intermittent speeds, and the dial position is relevant only when the lever is at the INT position. The decision table below shows the windshield wiper speeds (in wipes per minute) for the lever and dial positions.

9/3/2013 Boundary Value Testing 10

CSCE 747 Fall 2013 10

c1. Lever	OFF	INT	INT	INT	LOW	HIGH
c2. Dial	n/a	1	2	3	n/a	n/a
a1. Wiper	0	4	6	12	30	60

## Functional Testing

- Black Box testing

9/3/2013 Boundary Value Testing 12 Jorgensen, Paul C. Software Testing  
A Craftsman Approach

CSCE 747 Fall 2013 12

## Boundary Value Testing

- Consider testing  $f(x,y)$  subject to constraints
- $a \leq x \leq b$
- $c \leq y \leq d$
- “Strongly typed languages (such as Ada® and Pascal) permit explicit definition of such variable ranges.”

9/3/2013 Boundary Value Testing 13 Jorgensen, Paul C. Software Testing  
A Craftsman Approach CSCE 747 Fall 2013 13

## Input domain

- Input domain of a function of two variables.

- Automatically generate test cases

## Worst-Case Testing

- Worst-Case Testing

9/3/2013 Boundary Value Testing 18 Jorgensen, Paul C. Software Testing  
A Craftsman Approach CSCE 747 Fall 2013 18

## Robust worst-case test cases

- Robust worst-case test cases
- Combines robust and worst case

9/3/2013 Boundary Value Testing 19 Jorgensen, Paul C. Software Testing  
A Craftsman Approach CSCE 747 Fall 2013 19

## Special value testing

- Special value testing is probably the most widely practiced form of functional testing.
- most intuitive and least uniform.
- Ad hoc
